Black Squadron, Supposedly Sunk, Bobs Up and Batters Our Forts to Pieces.

THE CARNAGE IS TERRIBLE

Nothing but the Generosity of the Enemy Prevents Fall of New York.

NEW LONDON, Conn., Aug. 5.—The Black fleet, which was sent to the bottom of the sea yesterday with its entire complement of some 20,000 men, bobbed up serenely this morning and proceeded to hurl shot and shell into the batteries of Forts Wright, Michie and Terry. The result was calamitous for the forts.

Most of the artillerymen who manned the batteries so effectively yesterday are to-night dead on the field of battle or lying maimed and wounded in the hos-. Ambulances are flying hither and

may occur later. The defences of the eastern entrance of Long Island Sound

plete its business of destruction.

But from the fairyland nation whence came the hostile ships has been sent a wireless message to the Black fleet Admiral. It advises him to be merciful and suggests that New York, its eastern defences being in ruins, will probably capitulate without the firing of a shot.

They're at Our Back Door.

And this is the situation at New York's back door as regarded to-day by Rear Admiral Badger, commander of the Black fleet—which is none other than the North Atlantic fleet—who considers the sinking of his ships yesterday all a mistake.

To prove the error the ships were there bright and early this morning crawling around the edge of the horizon and looking at the great distance like so many black spiders reconneitring the outer edges of their webs.

In the early afternoon they crept in, taking on shape as they advanced and belching great stage clouds of black smoke. They proceeded in three divisions of four battleships each. One picked on Fort Wright, another on Fort Michie and the third on Fort Terry.

The attack was planned with such nicety that the first guns from each of the first three ships were fired almost simultaneously. And at that moment, which was 1:37 o'clock, Major-Gen. Berry learned with what accuracy his batteries

learned with what accuracy his batteries had been located by the enemy, for each one of the three guns fired landed a 12 inc shell in a mortar pit. At least that was what the navy observers guessed, and no one could deny it.

Then continued a steadily moving picture of three divisions of this nation's champion battleships. They passed in and out, firing volley after volley from turret and broadside. They advanced in echelon and retreated in columns. They whoeled into line formation and before the lattery range finders could catch their positions they had turned back into they had turned back into

Three Forts Are Gone.

Theoretically three forts were turned tated ruins. The great guns were laid over on their sides; the earthen parapets were tossed into the air by mighty ex-plosives, and the red brick barracks were razed to the ground.

But while Admiral Badger has figured

that this happened with the aid of his 108 12 inch guns and 150 or so smaller ones Gen. Barry of the artillery forces indi cates that the imaginary havoc wrought without any consideration of the fact that the Black fleet's fire was being returned shot for shot with his destructive

So it happens that in the manœuvres there being no umpires, the navy, according to its reckoning, has destroyed the forts, while the forts by their reckoning. have destroyed the fleet. The question will never be decided. After the final ex-ercises Friday, the leaders of both sides will meet not to discuss which side won but to learn what each might have done under the circumstances to enake both the defence and the attack stronger.

Already from personal observation Gen. Barry has been able to draw conclusions which when put in practice will materially strengthen the fighting power of all three forts. To-day he talked about of those conclusions.

It has been pretty well established that to make the batteries better able to re-sist such a fleet as the Black one, 10 and 12 inch guns should be installed. Such a change, Gen. Barry says, would not make the forts impregnable, but certainly would make an enemy more wary.

Furthermore, there should be a mortar

battery on Fort Michie, the middle one of the three. There, too, 14 inch guns should be placed.

One of the range finding positions on

One of the range finding positions on Fort Michie was destroyed during the first attack from the fieet. It is an old fashioned one looking something like an iron windmill and standing out about as plainly. The range finding position is the key to a battery's ability to aim true. If it were shot down the battery's effective first attack from the fieet. It is an old fashioned one looking something like an increase of 15 per cent. For those who have been earning less than the key to a battery's ability to aim true. It was suggested for over half a million. It was suggested for over half a million. It was suggested for the railroad and fraudulent to the stockholders, Mrs. Clementine B. Wentworth, a stockholder of the road, filed a bill in equity in the Superior Court to-day wherein she seeks to annul the says and the Rose Knitting Mills in East New York.

The strikers demand a fifty hour working week, a minimum wage of \$16 for time workers, with an increase of 15 per cent. For those who have been earning less than bill in equity in the Superior Court to-day wherein she seeks to annul the says and inequitable to the railroad and fraudulent to the stockholders, Mrs. Clementine B. Wentworth, a stockholder of the road, filed a bill in equity in the Superior Court to-day wherein she seeks to annul the says and inequitable to the railroad and fraudulent to the stockholders, Mrs. Clementine B. Wentworth, a stockholder of the road, filed a bill in equity in the Superior Court to-day wherein she seeks to annul the says and inequitable to the railroad and fraudulent to the stockholders, Mrs. Clementine B. Wentworth a stockholder of the road, filed a bill in equity in the Superior Court to-day wherein she seeks to annul the says and inequitable to the railroad and fraudulent to the stockholders, Mrs. Clementine B. Wentworth a stockholder of the road, filed a bill in equity in the Superior Court to-day wherein she seeks to annul the stockholders and increase of the railroad and fraudulent to the stockholders, Mrs. Clementine E

If it were shot down the battery's effectiveness would be cut in two.

Gen. Barry is inclined to believe that the guns in Fort Mansfield should be taken to Fort Wright. Mansfield is at the entrance to the harbor. It is out of range of the Sound's entrance and could

May Change Searchlights.

Searchlights have been under observa tion during the first two days of the exercises and as a result there will prob-ably be pretty radical changes in their positions. The Back fleet's destroyers, having reconnoitred for only two nights, bave definitely located a great many of these searchlights and been able, theo-

snap shortly after dawn. One division of battleships advanced rapidly on Fort Wright. Not a gun was fired until only 6,000 yards separated the opposing guns. Then the Wright mortars opened up and the ships retreated at full speed.

This was a trick on Admiral Badger's part to draw his enemy's fire. Again and again the ships steamed to range and pulled away. In the end Admiral Badger discovered what he wanted to know. There are weak points in the forts' target area. By advancing down certain lanes it is possible for a battleship to get within range of the fort and still be where none of the batteries can reach it.

batteries can reach it.

and proceeded to Fort Wright beneath the water, the battleships standing off and firing gun after gun. It was at this point that the value of a submarine was very

that the value of a submarine was very clearly indicated.

They were not seen by any of the fort's observers until within 2.000 yards of the shore. Even then they could be seen only through glasses, their slender periscopes sticking out above the water looking like pieces of pipe and noticeable at that distance only because of the stream of white foam left behind.

One of the submarines approached to

foam left behind.

One of the submarines approached to within 1,000 yards of shore. Its body was continually submerged, only the periscope showing. But down in the sea beneath that periscope the boat's commander was standing over his mirrors viewing the fort as clearly as if he were on the ocean's surface.

Several shots were fired at the bit of slender steel sticking from the water, but the battery observers would not claim that a hit had been made because of the tar-/ get's size.

Cannal Name of Stockholders

Congratulated

That Funds for Sub-

One Place of Real Danger.

The waters thereabout are filled with shords. The sailors were taking their lives in their hands. The slightest mis-hap, even a yard's advance too far, might have meant death. The object of the have meant death. The object of the morning's reconnoisance was not to destroy, but to make certain of battery localities and landmarks already discovered. That was what the submarines did. With the information obtained the entire fleet retreated out of range and drew its breath, so to speak. so to speak.

In the afternoon the attack was for destruction. Firing was hot and heavy on both sides. Gen. Barry had this to say about the Black fleet's work up to the

pitals. Ambulances are flying hither and thither; Red Cross nurses are being hurried hither and yon; legs are being amputated; bandages are being put on; the dead are being buried. If there had been more men in the forts than there are on the battleships the carnage to-day would have exceeded the slaughter of yesterday.

But this is merely a suggestion of what may occur later. The defences of the may occur later. The defences of the of war." of war. Last night's action was carried on by

are so irreparably battled and smashed destroyers from the fleet. Two divisions that the Black fleet has merely to get up of them, eight in all, were sighted by steam and head for New York to comsearchlights at a pretty long range, speeding thirty-two knots an hour toward the fort. They formed in two columns, proceeding in opposite directions, keeping up a steady fire and succeeding in enveloping themselves in such heavy clouds of black smoke that they finally became invisible from the fort even with the aid of searchlights.

Again to-night the destroyers are at work tiring at the searchlights, which

work, firing at the searchlights, which have already been hit and put out of business, and locating more of the mine fields, which are so much dreaded by

all war ships.

A certain neutrality has been declared regarding these mine fields, by which Col. Davis is permitted to continue to plant them while the battle rages. All would have been in place had not the firemen aboard the planters decided that they would not work overtime for any war that was not real.

IT'LL RAIN 1.046 POUND SHELLS.

Two boats of the Engineers Department will play searchlights on the sea between Sandy Hook and the target anchored off the Ambrose Channel lightship, and a searchlight on the Sandy Hook reservation will also help to create an incandescent lane for the shooters to aim through. It is expected that the projectiles that will be hurled seaward will be forty-five seconds in the air.

Guide boats will be on patrol to warn all craft to keep out of the danger zone. The mortar practice has nothing to do with the war game on the Sound.

7,000 KNITTERS STRIKE

CHEMISTS TALK OF CORONIUM.

Lightest Gas May Be Here, but It's Too Scarce to Fly With.

No information has been received by New York chemists through the usual scientific channels regarding the an-nouncement made in London yesterday morning that a gas has been discovered which is one-sixteenth the weight of hydrogen. The London Daily Citizen, which carries the announcement, quotes an English scientist as identifying the

gas as coronium.

gas as coronium.

The existence of this gas in the corona of the sun has been known for a good many years. In 1898 Prof. Nasini of the University of Padua in a note to the French Academy announced that he had found coronium in the gases from the fumarole of Vesuvius. One New York chemist said yesterday that he thought it likely that the English experimenters had succeeded in determining the vapor had succeeded in determining the vapor density of the already known gas, a de-termination which had not been made

termination which had not been made before, so far as he knew.

The discovery, as briefly announced in the cable despatches, was of particular interest because of the possible effect on aeronautics of the finding of a gas so much lighter than hydrogen. So far as the chemists talked with here yesterday were informed, however, the only record of the gas on the earth was the record of the gas on the earth was the report of the Italian experimenter. The possibility of obtaining it in sufficient quantities to be of use in navigating the was considered rather remote

DOCTORS DISCUSS NEW ROUX CHOLERA SERUM

Little Known of It as Yet-Must Stand Test of Use, Says Dr. Doty.

Cable despatches from Paris announce the discovery by Dr. Pierre Roux, director of the Pasteur Institute, of a new serum for cholera. Dr. Roux is quoted as informing the Academy of Sciences that monkeys which had been infected with cholera were completely cured by means of the serum.

Dr. Roux already is one of the dis-coverers of a serum, known as the Roux-Yersin scrum, which has been used for ten years in the treatment of cholera in China and India. Dr. Yersin, also con-nected with the Pasteur Institute, has

ested in this subject said yesterday that they were uncertain as to what was meant by the cabled versions of the an-Brooklyn Rapid Transit Company sold 540,000,000 of its six year notes on a 6 per cent. basis less a commission of 1 per cent. to the Central Trust Company, Kuhn, Loeb & Co. and Kidder, Peabody & Co. last fall, President Williams says:
